## PROFESSIONAL SUMMARY

AI Engineer and Computer Science graduate (2025) with hands-on experience building LLM-powered pipelines, RAG and GraphRAG systems, and Agentic AI workflows using LangChain, LangGraph, FAISS, and Neo4j. Skilled in designing multi-step AI agents, knowledge-graph retrieval pipelines, and end-to-end ML/DL solutions across NLP and computer vision, with a track record of deploying production-grade AI applications via Streamlit, FastAPI, Docker, and Hugging Face Spaces.

## CORE SKILLS

|                                                                                                                                                                                                                                  |                                                                                                                   |                                                                                                         |
